contents

Preface xi

1 Introducting Microsoft Analysis Services 1

1.1 What is Analysis Services 2005? 1
Introducing OLAP 2 • Introducing Data Mining 4 • Overview of SSAS 5 • SSAS and Microsoft Business Intelligence Platform 6

1.2 Understanding OLAP 10
Relational Model 11 • Dimensional Model 11

1.3 Understanding The Unified Dimensional Model 16
Relational Model Features 17 • Dimensional Model Features 19 • UDM Components 21 • To UDM and Beyond 23

1.4 Analysis Services Architecture 23
Analysis Services Server 24 • XML for Analysis (XMLA) Specification 24 • SSAS Clients 26

1.5 Analysis Services in Action 27
Introducing Adventure Works Sales OLAP System 27 • Your First OLAP Report 29

1.6 Summary 34

1.7 Resources 35

Part 1 The Unified Dimensional Model 37

2 Working with data 39

2.1 UDM Data Concepts 39
SSAS Databases 39 • Data Sources 41 • Data Source Views 44

2.2 Designing Databases 44
Project Mode 45 • Online Mode 46 • Other Management and Design Options 47

2.3 The Four-Step Design Process 48
Step 1: Select Business Process 49 • Step 2: Declare Grain 49 • Step 3: Choose Dimensions 50 • Step 4: Identify Facts 50

2.4 Implementing the Real-time Schema 51
Working with Analysis Services Projects 51 • Connecting to Data Sources 53 • Choosing Data Source Authentication Mode 55 • Constructing the Real-time Data Source View 58

2.5 Implementing the Historical Schema 66
Designing the Data Warehouse Data Schema 66 • Constructing the Historical Data Source View 69

2.6 Summary 75

2.7 Resources 75

3 Dimensional modeling basics 76

3.1 Understanding Dimensions 76
Attributes 76 • Hierarchies 80 • Member properties 82 • Dimension Classification 86 • Dimension Storage 86

3.2 Understanding Measures 87
Measure Bindings 87 • Measure Groups 88 • The Cube Object Schema 88

3.3 Implementing the Raw Dimensional Model 89
Building a Cube using the Cube Wizard 89 • Introducing the Dimension Wizard 95 • Introducing the Dimension Designer 100 • Introducing the Cube Designer 105

3.4 Summary 112

3.5 Resources 112

4 Working with dimensions and measures 113

4.1 Working with Standard Dimensions 113
Separating Historical and Real-time UDMs 114 • Configuring Attributes 114 • Configuring Attribute Hierarchies 115 • Creating a Multilevel Hierarchy 118 • Defining the Hierarchy Top Member 119 • Sorting Attribute Members 120

4.2 Implementing Advanced Hierarchies 123
Creating Ragged Hierarchies 123 • Implementing Multiple Hierarchies 124 • Working with Parent-child Hierarchies 128 • Grouping Attribute Members 133

4.3 Implementing Time Dimensions 136
Standard Time Dimensions 136 • Server Time Dimensions 139

4.4 Working with Measures 144
Formatting Measures 144 • Understanding Measure Additivity 145 • Working with Additive Measures 147 • Creating New Measure Groups 150 • Working with Measure Expressions 152

4.5 Summary 155

4.6 Resources 155

5 Advanced dimensional modeling 156

5.1 Working with Dimension Relationships 156
Understanding Dimension Usage 157 • Multi-Grain Relationships 159 • Role Playing Relationships 162 • Fact Relationships 163 • Reference Relationships 167 • Many-to-Many Relationships 169 • Treating Dimensions As Measure Groups 171

5.2 Advanced Data Analytics 173
Handling Semi-additive Measures 173 • Implementing Accounting Intelligence 174 • Using Custom Aggregation 178 • Dimension Writeback 182

5.3 Working with External UDM Objects 185
Linking Dimensions and Measure Groups 186 • Working with Linked Object Relationships 188

5.4 Handling Data Integrity Issues 189
Understanding Error Configurations 189 • Enabling the Dimension Unknown Member 190 • Dealing with Fact Table Integrity Errors 192

5.5 Summary 194
5.6 Resources 194

Part 2 Data Warehousing and Mining 195

6 Data warehousing 197

6.1 Working with UDM Templates 197
Introducing the Inventory UDM 197 • Creating a Cube Template 199

6.2 Building UDM Top-down 201
Creating a Cube without a Data Source 201 • Generating the Subject Area Database Schema 204

6.3 Integrating Data with SSIS 208
Understanding SSIS projects 208 • Loading the Staging Database 210 Loading the Subject Area Database 212 • Processing Analysis Services Objects 219 • Working with Package Configurations 220 • Testing Package Execution 221

6.4 Summary 223

6.5 Resources 223

7 Data mining fundamentals 224

7.1 Understanding Data Mining 224
What is Data Mining? 225 • Data Mining Tasks and Algorithms 226 • Data Mining Architectural View 227 • Data Mining Extensions (DMX) 228

7.2 Data Mining Objects 229
Data Mining Models 229 • Data Mining Structures 233 • The Data Mining Design Process 235

7.3 Targeted Campaigning Example 238
Defining the Mining Domain 238 • Preparing the Data 239 • Constructing the Data Schema 239 • Building the Model 240 • Exploring the Model 246 • Evaluating the Model 251

7.4 Summary 256

7.5 Resources 257

8 OLAP data mining 258

8.1 OLAP vs. Relational Data Mining 258
Advantages of OLAP Data Mining 258 • OLAP Data Mining Tradeoffs 259

8.2 Customer Profiling 259
Defining the Mining Domain 260 • Implementing OLAP Mining Model 260 • Understanding OLAP Mining Structures 264 • Exploring the Model 264 • Enhancing UDM with Data Mining 266

8.3 Basket Analysis 267
Working with Nested Tables 267 • Exploring the Model 271

8.4 Sales Forecasting 273
Designing the Model Schema 274 • Constructing the Mining Model 275 • Exploring the Mining Model 278 • Fine-tuning the Mining Model 280

8.5 SSIS Integration 283
Building a Data Mining-aware Integration Package 283 • Working with the Data Mining Query Task 284
8.6 Summary 285
8.7 Resources 285

Part 3 Programming Analysis Services 287

9 MDX fundamentals 289

9.1 Understanding MDX 289
What is MDX? 289 • How is MDX Used in UDM? 290 • Tuples and Sets 293 • How Autoexists Affects The Cube Space 297
9.2 Understanding MDX Scripting 299
Introducing the MDX Designer 299 • How the Cube Aggregates 302 • Troubleshooting MDX Errors 303 • Your First MDX Expression 305 • Calculating Averages 308
9.3 Navigating Hierarchies Horizontally 310
Working With Time Dimensions 311 • Comparing Values Between Adjacent Time Periods 311 • Comparing Values Between Parallel Time Periods 315 • Period-to-Date Aggregations 317
9.4 Navigating Hierarchies Vertically 318
Calculating Ratios 319 • Allocating Values 322 • Creating Dimension Calculated Members 324
9.5 Summary 326
9.6 Resources 326

10 Advanced MDX expressions 327

10.1 Working with MDX Sets 327
Constructing Sets 327 • Using Sets in MDX Queries 330 • Crossjoining Sets 331• Filtering Sets 333 • Named Sets 336
10.2 Using Subcube Expressions 341
Understanding Subcube Expressions 341 • Your First Subcube Expression 342 • Script Execution Revisited 346 • Implementing Targeted Allocations 348
10.3 Implementing Business Intelligence 351
Applying Time Intelligence 351 • Handling Currency Conversions 355
10.4 Summary 360
10.5 Resources 360

11 Extending UDM with custom code 361

11.1 Understanding MDX Extensibility 361
Extensibility Scenarios 361 • What's New in MDX Extensibility 362
11.2 Using Standard External Libraries 362
Exploring the External Libraries 363 • Setting the Default Member Programmatically 363
11.3 Implementing Stored Procedures 365

Understanding Stored Procedures 365 • Deploying Stored Procedures 368 • Securing Stored Procedures 370 • Invoking Stored Procedures 371 • Debugging Stored Procedures 371

11.4 Using the ADOMD.NET Server library 372
Exploring the ADOMD.NET Object Model 372 • Working with Current Context 373 • Constructing a Set Dynamically 375 • Getting Data Mining Prediction Results 377

11.5 Summary 379

11.6 Resources 379

12 End-user model 380

12.1 Measuring Business Performance 380
Understanding KPIs 380 • Your First KPI 383 • Implementing FOSH Metrics 387 • Retrieving the KPI Metadata 390

12.2 Extending UDM With Actions 392
Understanding Actions 393 • Requesting URL Resources With Regular Actions 394 • Displaying Detail Cell Data With Drillthrough Actions 398 • Generating Reports With Reporting Actions 401 • Changing Cell Data With Cube Writeback 404

12.3 Putting UDM Into Perspective 410
Understanding Perspectives 410 • Defining Perspectives 411

12.4 Localizing UDM With Translations 412
Understanding Translations 413 • Translating Metadata 413 • Translating Data 414 • Testing Translations 416

12.5 Summary 417

12.6 Resources 417

Part 4 Managing Analysis Services 419

13 Managing fundamentals 421

13.1 Understanding Analysis Services Management 421
The UDM Management Lifecycle 421 • Managing the Analysis Server 423 • Scripting Objects and Tasks 425

13.2 Managing Databases 428
Deploying Databases 428 • Synchronizing Databases 433 • Backing up and Restoring Databases 435 • Automating Management Tasks 435

13.3 Monitoring Analysis Services 437
Tracing With SQL Server Profiler 437 • Monitoring the Server Performance with Performance Counters 441 • Capture and Replay With Flight Recorder 443 • Error Logging and Reporting 444

13.4 Programming with AMO 444
Understanding Management API 445 • AMO vs. ADOMD.NET 446 • Creating Local Cubes with AMO 447

13.5 Summary 450

13.6 Resources 451

14 Managing storage 452

14.1 Designing Storage 452
Understanding Storage Modes 453 • Configuring Partition Storage 456 • Configuring Dimension Storage 458

14.2 Managing Aggregations 458
Understanding Aggregations 459 • Designing Aggregations 461 • Usage-Based Optimization 466 • Examining the Aggregation Design 469

14.3 Optimizing Storage 470
Architecting Large-Scale SSAS Sites 470 • Optimizing Partition Storage 472 • Creating Partitions Programmatically with AMO 478 • Generating Partitions with SSIS 482

14.4 Summary 484

14.5 Resources 484

15 Managing processing 485

15.1 Understanding UDM Processing 485
Types of Data Changes 486 • Analyzing Processing Impact 486

15.2 Processing Dimensions 487
Understanding Dimension Processing 488 • Rebuilding Dimensions 488 • Incrementally Processing Dimensions 491

15.3 Cube Processing 493
Understanding Cube Processing 493 • Rebuilding Cubes 494 • Refreshing the Cube Data 494 • Processing Cubes Incrementally 495

15.4 Automating Processing Tasks 497
Automating Processing With SSIS Packages 497 • Automating Processing With Scripting 499 • Processing Best Practices 500

15.5 Low-Latency OLAP Solutions 500
The Reality of Real Time OLAP 500 • Push-Mode Processing 503 • Proactive Caching 507

15.6 Summary 518

15.7 Resources 518

16 Securing Analysis Services 519

16.1 Understanding SSAS Role-based Security 519
Understanding Roles 520 • Permissions and Access Rights 523 • Creating Database Administrator Role 525 • Managing Cube-level Security 528

16.2 Managing Dimension Security 531
Understanding UDM Data Security 531 • Configuring Basic Dimension Security 533 • Configuring Advanced Dimension Security 535 • Implementing Dynamic Dimension Security 539

16.3 Managing Cell Security 543
Understanding Cell Security 543 • Restricting Cell Data Access 545 • Externalizing Cell Data Security 545

16.4 Deployment Scenarios And Security 547
How Security Impacts Intranet Applications 547 • Internet Security Approaches 548
16.5 Summary 553
16.6 Resources 553

Part 5 Building Business Intelligence Solutions 555

17 Integrating applications with UDM 557

17.1 Understanding Integration Options 557
Thin Clients 558 • Native Clients 559 • .NET Clients 560
17.2 Implementing Thin Clients 561
Web Service Integration 561 • Other XMLA Integration Options 564 • Tracing XMLA Traffic 566
17.3 Implementing Legacy Clients 569
Introducing the Legacy Client Sample Application 569 • Retrieving the UDM Metadata 570 • Working with MDX Queries 571
17.4 Implementing .NET Clients 572
Understanding ADOMD.NET Object Hierarchy 573 • Introducing the DotNetClient Application 574 • Managing Connections and Sessions 574 • Retrieving the Query Results 576
17.5 Implementing Data Mining Clients 580
Querying Mining Models 580 • Generating Session Mining Models 585 • Generating Local Mining Models 587 • Displaying Data Mining Results 588
17.6 Summary 590
17.7 Resources 591

18 Standard and ad hoc reporting with Reporting Services 592

18.1 Understanding Reporting Services 592
Reporting Services Architecture 593 • Integrating Reporting Clients 595
18.2 Authoring OLAP Reports 596
Report Authoring Basics 596 • Creating Tabular Reports 598 • Implementing Parameterized Reports 604 • Designing Chart Reports 608
18.3 Authoring Data Mining Reports 608
Targeted Campaigning 609 • Sales Forecasting 610 • Working with CLR Stored Procedures 614 • Implementing Drillthrough Navigation 616
18.4 Delivering Reports 617
Report-enabling Windows Reporting Clients 618 • Integrating Web Reporting Clients 622
18.5 Generating UDM Ad hoc Reports 622
Understanding Ad hoc Reporting Architecture 623 • The Ad Hoc Model 624 • Authoring Ad hoc Reports 625
18.6 Summary 627
18.7 Resources 628

19 Business intelligence with Microsoft Office 629

19.1 Using Excel Analytics Tools 629
Authoring PivotTable Reports 630 • Building Local Cubes 636 • Creating Structured Reports 637

19.2 Interactive Reporting with OWC 642
Understanding Office Web Components 642 • Programming OWC 644 • Integrating OWC with Reporting Services 646

19.3 Corporate Performance Management 648
Understanding Business Scorecard Manager 648• Implementing Scorecards 650 • Deploying Scorecards 660

19.4 Summary 662

19.5 Resources 663

Appendix A 664

A.1 Preparing to Set up Analysis Services 664
Reviewing Requirements 664 • Installing Prerequisites 665 • Checking System Requirements 666

A.2 Installing SQL Server Components 666
Selecting Components 667 • Choosing Features 668 • Configuring Installation Instances 668 • Setting up Service Account 669 • Choosing Authentication Mode 670 • Configuring Reporting Services 670

A.3 Post-Installations Steps 671
Configuring SQL Server 2005 Surface Area 672 • Installing Analysis Services Samples 672 • Installing Visual Studio.NET 672

A.4 Resources 672

Appendix B 673

B.1 Preparing For Upgrade 673
Analysis Services 2000 and UDM Equivalents 673 • Understanding Upgrade Options 675

B.2 Migrating to UDM Example 678
Preparing for Upgrade with Upgrade Advisor 678 • Migrating Legacy Databases with Migration Wizard 680 • Switching to Project Mode 682

B.3 Resources 683

Master resource list 684
